ELECTRONIC PARTS CHILLER

24106

FOR USE IN:

- Assembly of Electronic Circuits
- Electronic Testing
- Soldering or Desoldering
- Small Parts Instant Chilling Process
- Non-Destructive Testing of Electronic and Electro-Mechanical Systems

A high purity freezing agent for electronic application. Allows isolation of single components in low temperature electronic testing. Protects expensive components during soldering or desoldering and non-destructive testing of electronic and electro-mechanical systems. Quickly cools thermostats for activation and testing. A highly efficient localized heat sink for assembly of electronic circuits. Instantly chills small pins, shafts, bushings, bearings, etc., for precision shrink-fitting.

- Moisture Free • Leaves No Residue
- Quick Freezing Action
- Specially Formulated with No Flammable Ingredients

- Contains No Volatile Organic Compounds
- 100% Ozone Safe • 0% VOC
- Finger Friendly Actuator which Helps Prevent Finger Tip Chill and Fatigue
